Section 9.4 Mathematical Induction

Objective: In this lesson you learned how to use mathematical induction to prove statements involving a positive integer n.

Important Vocabulary Define each term or concept.

Mathematical induction

I. Introduction (Pages 648–651)

What you should learn
How to use mathematical induction to prove a statement

To apply the Principle of Mathematical Induction, you need to be able to determine the statement _____ for a given statement P_k.

When using mathematical induction to prove a summation formula, it is helpful to think of S_{k+1} as . . .

Describe the process needed to prove a formula using mathematical induction.

The extended principle of mathematical induction is . . .

II. Sums of Powers of Integers (Page 652)

What you should learn
How to find the sums of powers of integers

List the formulas for the following sums of powers of integers.

1. $1+2+3+4+\cdots+n=$ _____

2. $1^2+2^2+3^2+4^2+\cdots+n^2=$ _____

3. $1^3+2^3+3^3+4^3+\cdots+n^3=$ _____

4. $1^4+2^4+3^4+4^4+\cdots+n^4=$ _____

5. $1^5+2^5+3^5+4^5+\cdots+n^5=$ _____

III. Finite Differences (Page 653)

What you should learn
How to find finite differences of a sequence

First differences are . . .

When the first differences of a sequence are all the same, the sequence has a _____ model.

Second differences are . . .

When the second differences of a sequence are all the same, the sequence has a _____ model.
